

Cyber CNS

Vulnerability Management Platform

A Security Platform built by MSPs for MSPs

Purpose-built for MSPs by MSPs

- CyberCNS is a Cloud-native, centrally managed, multi-tenant platform.
- Deploy CyberCNS with your existing RMM tool.
- Validate and secure WFH environments.
- Test attack surfaces with external scans.
- Integration with your ticketing system.

Cloud Integrated

Our platform integrates with Office365 and Azure, including CSP, to provide a unified security view and delivers the Office 365 Secure Score.

www.cybercns.com

Continuously **detect, manage & protect** your IT assets for CVEs, zero-day vulnerabilities, and common misconfigurations based on CIS 20 Benchmarks.

CyberCNS is the only MSP/MSSP platform that empowers you to gain control of customer risks by identifying and prioritizing vulnerabilities across their entire attack surface including traditional, cloud, mobile and DevOps environments.

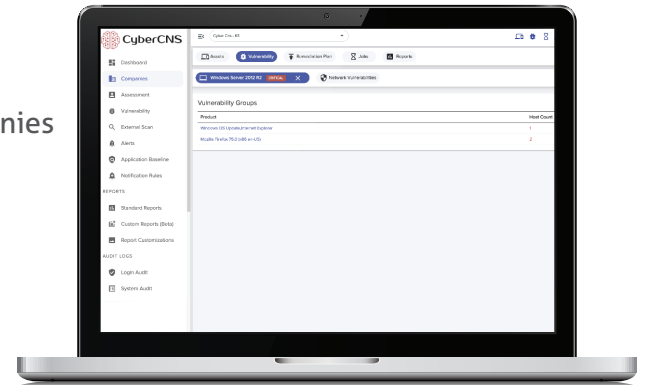

Patch Management Is Not Vulnerability Management

Differentiate yourself from your competition who are telling their customers that their RMM tool resolves vulnerabilities. Vulnerability management is confused with patching. Deliver more value by providing comprehensive vulnerability management.

Bring In Net New MRR

Drive new MRR by showing companies immediate results through:

- Initial assessment
- Developing a roadmap
- Leave in place for continuous monitoring

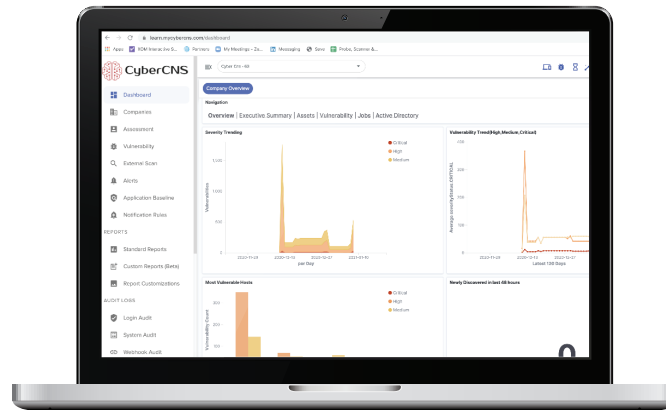

Stay Ahead of the Competition & the Criminals

Over 300 new vulnerabilities were detected on average every day in 2020 versus 28 vulnerabilities discovered per day in 2016. CyberCNS simplifies the complexity of vulnerability management. Now existing support teams can effectively manage vulnerabilities reducing risk.

Reporting Your Way

There are several options when it comes to reporting.

- Choose from our library
- Create your own custom templates
- Customizable Branding
- Easily export reports in a variety of formats (HTML, CSV, PDF and PowerPoint).

CyberCNS Feature Comparison Chart

Feature	RapidFire Tools	Qualys	CyberCNS
Asset Discovery and Tracking	Partial (No Tracking)	✓	✓
Subnet Scan	✓	✓	✓
